

**CHANNEL ISLANDS HARBOR WATER QUALITY:
REMOTE SENSOR DATA – 4/27/22 THROUGH 5/5/22**

Below is the weekly remote sensor data from 4/27/22 to 5/5/22. Dissolved oxygen concentrations (DO; in blue) were acceptable at both stations. Chlorophyll concentrations (a proxy for microscopic algal biomass, in green) were generally low with normal daily oscillations observed, though there is a trend of increasing chlorophyll concentrations at Westport (station 7).

The City of Oxnard and Aquatic Bioassay & Consulting will continue to monitor the sensors in the area.
